European Digital Innovation Hubs in Digital Europe Programme

Draft working document 22-10-2020

Disclaimer: This is a document to prepare the implementation of European Digital Innovation Hubs in Digital Europe Programme. It is based on the draft Digital Europe Programme regulation and the outcome of four meetings with Member State representatives where these ideas were discussed. It has also been validated with other stakeholders during the 3rd Stakeholder Forum on Digitising European Industry “Artificial Intelligence and Digital Innovation Hubs – beyond 2020”, which took place on 13-15 November 2019 in Madrid. The Digital Europe Programme is subject to approval by the European Parliament and the Council.

This is a minor update of the document dated 05-05-2020 with corrections in the explanation of state aid (Section 2.3), small clarifications in Sections 3.2, 3.2.1 and 3.2.2, and updates to the “Proof of designation” and “EU survey” at the end of the document. It takes into account a budget reduction of 17,5%, which is caused by the outcome of the European Council meeting of July, and it has the timing of different steps adapted to what is known on the 8th of October. It will stay in “draft” status, and only factual errors will be corrected. The final version of these ideas will be published in the Workprogramme of Digital Europe Programme that is under development.

The European Commission cannot be held liable for any of the views expressed in this document.

SUMMARY – EUROPEAN DIGITAL INNOVATION HUBS

European Digital Innovation Hubs (EDIHs) will play a central role in the Digital Europe Programme to stimulate the broad uptake of Artificial Intelligence, High Performance Computing (HPC) and Cybersecurity as well as other digital technologies by industry (in particular SMEs and midcaps) and public sector organisations in Europe. EDIHs are one-stop shops that help companies become more competitive with regard to their business/production processes, products or services using digital technologies, by providing access to technical expertise and experimentation, so that companies can “test before invest”. They also provide innovation services, such as financing advice, training and skills development that are needed for a successful digital transformation. EDIHs will also support companies and public sector organisations in the use of digital technology to improve the sustainability of their processes and products, in particular with regard to energy consumption and reduction of carbon emissions.

European Digital Innovation Hubs will have both local and European functions. EU funding will be made available for hubs that are already (or will be) supported by their Member States (or regions), so as to increase the impact of public funding. The Digital Europe Programme will increase the capacities of the selected hubs to cover activities with a clear European added value, based on networking the hubs and promoting transfer of expertise. The initial network of EDIHs will be established from a list of hubs designated by Member States, which have an essential role in the selection process. The European Commission will launch an expression of interest for Member States to designate their candidate hubs. Most M

This document explains how the Digital Europe Programme will be implemented, how it complements the support to digital transformation of the economy under other EU programmes, and how it contributes to building a successful network of hubs covering all regions of Europe.

According to the current draft timing of Digital Europe Programme, it is expected that the Expression of Interest and the restricted call for proposals will be launched on 27 January 2021 so that the selected EDIHs can start their operation in 2021. This implies that Member States should be ready to designate their hubs to the Commission by October 2020.

1. CONTEXT

1.1. Further need for digital transformation

The digital transformation of the economy is key for Europe to remain competitive internationally. Our companies and public sector organisations need to integrate digital technologies into their business processes, products, and services to fully benefit from the efficiency gains and innovation they may bring, while remaining environmentally sustainable and reducing greenhouse gas emissions. In particular, the smart use of data can be a powerful lever to drive growth, create new jobs and open up new business models and innovation opportunities. Four years after the launch of the Digitising European Industry Strategy and the eGovernment Action Plan, the European economy has made significant progress. The level of digitalisation however remains uneven, depending on the sector, country and size of company: **only 20% of SMEs in the EU are highly digitised**. A similar pattern is observed for the adoption of eGovernment, where the overall adoption of eGovernment services is 53%, with some countries reaching more than 75% and other countries still below 30% (see Figure 2). European Digital Innovation Hubs have a key role to play to address these gaps.

1.2. Digital transformation and the strategic challenges today

With the Green Deal communication of December 2019¹, the European Commission has committed to “tackling climate and environmental-related challenges that is this generation’s defining task”, and defined a set of strong measures aiming at getting no net greenhouse gases emissions by 2050 and decoupling economic growth from resource use.

Meeting these objectives will require significant technological advances in several areas, and digital technologies will be a key tool to improve efficiency and sustainability of any aspect of our lives. The network of European Digital Innovation Hubs should therefore help companies of any size to get access to the digital technologies they need to contribute to the European Green Deal.

A second, very recent, problem is threatening Europe and the world today. The global epidemic of COVID-19 is imposing a heavy toll in terms of human lives and is showing its deep impact on the economy. The recent events have also clearly demonstrated how digital technologies enable resiliency for the society at large, e.g. by allowing remote communications of important information and supporting solutions like large-scale teleworking.

There is little doubt that the coming months will see a significant economic crisis. It is important that, as soon as the conditions for an economic recovery will mature, European companies will be ready to exploit the future opportunities, and for this they have to be equipped with the digital technologies they need and the know-how to make the best use of them. A working network of European Digital Innovation Hubs will be an important success factor.

1.3. What is a European Digital Innovation Hub?

A European Digital Innovation Hub (EDIH)² is a single organisation or a coordinated group of organisations with complementary expertise, with a not-for-profit objective³ that support companies – especially SMEs and mid-caps – and/or the public sector in their digital transformation. EDIHs offer services such as (see Figure 3):

- **Test before invest:** The Digital Europe draft regulation mentions: “*raise awareness and provide, or ensure access to, digital transformation expertise, know-how and services, including testing and experimentation facilities*”. The

¹ The European Green Deal, COM(2019) 640

² Digital Europe Programme has the following definition: ‘European Digital Innovation Hub’ means legal entity selected in accordance with Article 16 in order to fulfil the tasks under the Programme, in particular providing directly, or ensuring access to, technological expertise and experimentation facilities, such as equipment and software tools to enable the digital transformation of the industry, as well as facilitating access to finance. European Digital Innovation Hub shall be open to business of all forms and sizes, in particular to SMEs, midcaps, scale-ups and public administrations across the Union;

³ The beneficiaries should declare that for the activities covered by the grant they apply a not-for-profit objective, i.e. all money earned by them or donated to them is used in pursuing the EDIH’s objectives and keeping it running.

group of services enabling test before invest may include: awareness raising, digital maturity assessment, demonstration activities, visioning for digital transformation, fostering the integration, adaptation and customisation of various technologies, testing and experimentation with digital technologies (software and hardware), knowledge and technology transfer. Special focus will be on the key technologies promoted in Digital Europe Programme: HPC, AI, and Cybersecurity.

- **Skills and training:** The draft regulation mentions: “They will also provide support in the area of advanced digital skills (e.g. by coordinating with education providers for the provision of short-term training for workers and internships for students)”. To ensure the appropriate level of digital skills within the supported organisations in order to make the most of digital innovations technologies, EDIHs' services should include advertising, hosting or providing of training, boot-camps, traineeships, as well as supporting the implementation of the short-term advanced digital skills training courses and job placements developed as part of the DEP Advanced Digital Skills pillar.
- **Support to find investments:** The draft regulation mentions “to support companies, especially SMEs and start-ups, organisations and public administrations to become more competitive and improve their business models through use of new technologies covered by the Program”. Therefore, this category of services may include: access to financial institutions and investors, supporting the use of InvestEU and other relevant financing mechanisms, in close co-operation with the foreseen InvestEU Advisory Hub⁴ and the Enterprise Europe Network (EEN)⁵. For the public sector in particular, as one of the largest purchasers of ICT, this service could furthermore provide support to leverage the purchasing power of the public sector, transforming it into a large innovation buyer.
- **Innovation ecosystem and networking:** The draft regulation mentions: “*European Digital Innovation Hubs should act as facilitator to bring together industry, businesses and administrations which are in need of new technological solutions on one side, with companies, notably start-ups and SMEs that have market-ready solutions on the other side*”. No company can innovate alone. It will help companies greatly if they are brought into contact with other companies of their value chain, with innovators, or early clients that want to test solutions. EDIHs should play this brokering role and bring e.g. end-users and potential suppliers of technological solutions into contact with each other for e.g. experimentation and testing, or public administrations and GovTech companies to promote co-creation. The non-profit objective of EDIHs is important in this respect, and they might promote local companies to improve the overall economic strength of their local economy. When suitable local partners may not be found, the hubs can network with other EDIHs to find a matching partner elsewhere in Europe. Hubs can only become good brokers if they do regular technology scouting, in order to map the innovation ecosystem, and understand needs and opportunities. Structured relationships with regional authorities, industrial clusters, SME associations, business development agencies, incubators,

⁴ The InvestEU Advisory hub is foreseen to become part of the future InvestEU programme (see Section 1.6)

⁵ The Enterprise Europe Network helps businesses innovate and grow on an international scale. It is the world's largest support network for small and medium-sized enterprises (SMEs) with international ambitions. (<https://een.ec.europa.eu>)

accelerators, EEN, EIT Co-location Centres, and chambers of commerce will greatly help the brokering function.

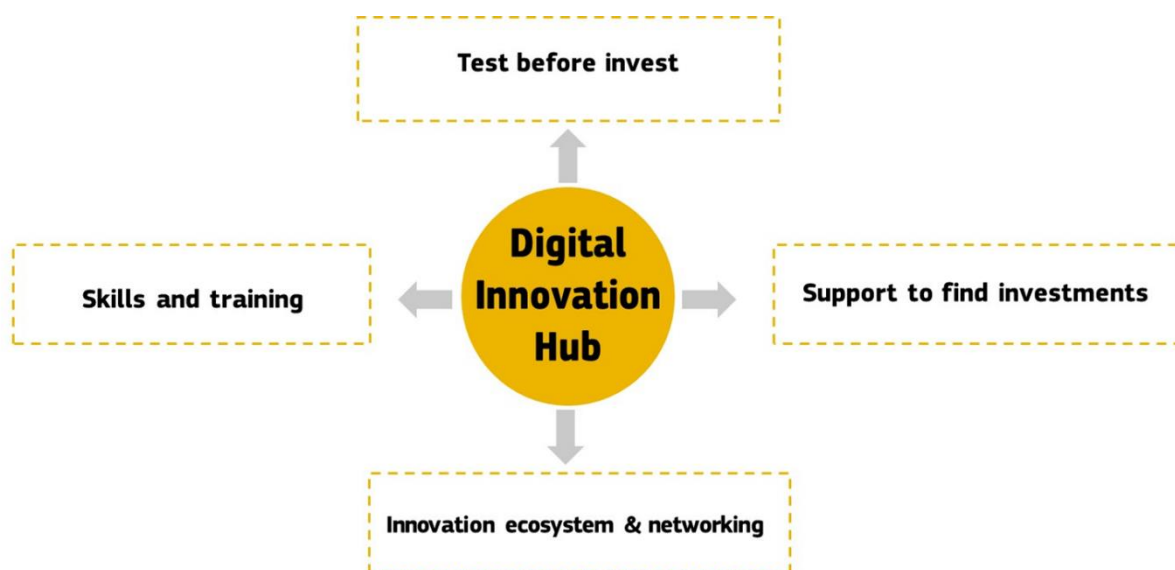

Figure 3. Main functions of European Digital Innovation Hubs

The **services of the EDIHs should be complementary to and not replace existing (commercial) services** of e.g. training suppliers or ICT companies. Through the function “Innovation ecosystem & Networking”, a hub works also as a broker and matchmaker between needs of certain companies and possible suppliers. Suppliers can be involved in the “Test before invest” or “Skills and training” activities. Hubs may give preference to local SMEs as suppliers, and if these are not available to other European SMEs, in line with their procurement rules; equal opportunities should be provided to all potential suppliers. Such companies do not need to be part of the consortium of beneficiaries of the grant, but could be involved through subcontracting.

1.4. Organisations involved in a European Digital Innovation Hub

The draft regulation mentions: “(4a) *European Digital Innovation Hubs shall have substantial overall autonomy to define their organisation, composition, and working methods*” and “(11b) *A consortium of legal entities may be selected as European Digital Innovation Hubs [...].*”

While EDIHs are free to define their organisation, composition, and governance structure, they should cover at least the technology side and the business development side, and be capable of doing effective outreach. They should also have appropriate links to companies and/or public sector organisations. At the core of the EDIH, there is normally a research & technology organisation (RTO)⁶ or university lab offering technology services. They often work in collaboration with partners whose expertise lies in business development/public sector innovation or training in order to provide innovation services as well as with partners (such as for example chambers of commerce,

⁶ RTOs are public or private organisations that provide a range of research, development and technology services, principally to business and governments

industrial clusters, industry associations, the Enterprise Europe Network (EEN), incubators, EIT KIC, vocational training centres or others). EEN could help find investors / finance providers, while a regional cluster could help companies tap into international markets. Links with incubators/accelerators might be useful to involve start-ups in the ecosystem, and industry associations to understand requirements and future needs and digital suppliers. EIT KIC or industrial clusters could also be the basis of an EDIH, if they are willing and able to fulfil the tasks that an EDIH needs to carry out. A seamless service is expected between different initiatives funded by the European Commission, such as the EEN and the EDIHs. Annex 6 explains this in more detail.

In order to benefit from DEP funding, the European Digital Innovation Hubs may create a consortium of legal entities; their collaboration may be governed by a consortium agreement or similar. There is no obligation to create a dedicated legal entity. An EDIH should have a local presence, but it is allowed to collaborate with organisations from other regions for the purpose of creating a well-balanced and effective consortium.

There is also a role to play for large corporates. Often such companies work together with a large number of (SME) suppliers. Large corporates could therefore be involved in defining some of the services of the EDIH to make sure that local industry profits from digital transformation; a stronger local industry is beneficial to smaller and bigger companies alike. Also large corporates could make in-kind contributions to the hub, e.g. software and equipment for “test before invest”. They can also sponsor the hub further, provided that the not-for-profit objective and the neutral brokering role of the hub remains.

The involvement of other partners, like creatives or artists could be considered. They could help to embed digital better in the creative sector but equally to help shape new practices of human-machine co-existence in specific industry sectors. Often lack of awareness of consequences of use of digital technologies – like fear of loss of control or of working conditions in presence of digital technology – are hindering uptake as much as lack of technological skills. The digital sector can profit from the cultural and creative industries to bring a new perspective to the sector.

If a hub until now was only focused on private sector, but in the future would like to serve public administrations as well, it can consider including organisations dedicated to public administration and public sector innovation in their consortium.

1.5. Digital Europe Programme knowledge transfer mechanisms

The Digital Europe Programme will focus on capacity building for five “Specific Objectives”: high performance computing (HPC), artificial intelligence (AI), cybersecurity, related advanced digital skills, as well as digital solutions / interoperability for the public sector. Technologies and knowledge developed under Specific Objectives 1, 2 and 3 will be made available by HPC Competence Centres, AI Testing and Experimentation sites, Cybersecurity National Coordination Centres. Specific Objective 4 will create an offer of trainings and job placements available for the different target groups. Specific Objective 5 will deliver digital service infrastructures for areas of public interest. To make sure that those capacities are actually used by companies and public administrations, European Digital Innovation Hubs will work closely with the relevant specialised centres or consortia responsible for the different DEP projects and make sure

that companies and public administrations can experiment with those technologies and apply them according to their needs. For example:

- the hubs can help SMEs to make use of the advanced computing facilities of the HPC centres;
- the hubs can also promote the AI-on-demand platform, which makes AI algorithms and public data sets available for anyone. EDIHs can help SMEs to experiment with this platform, and identify those datasets and algorithms that are relevant for the needs of those companies;
- security audits are important activities for SMEs. Here also, the EDIHs should promote this to their stakeholders;
- regarding training, the EDIHs may be one of the organisations selected to provide short-term training courses or they may just host them for organisations in their area. In any case, they should broadly advertise the available trainings that are relevant for their stakeholders. The hubs should also promote job placement opportunities to their network of SMEs / public administrations. Section 1.6 describes in more detail some examples of EDIH activities for the public sector.

Special horizontal support activities are foreseen to support the necessary knowledge transfer from the Specific Objectives towards the EDIHs and vice versa (see Section 2.6)

1.6. EDIHs for public sector: digital service infrastructures (DSIs) and interoperability solutions

Modernising public administrations and services through digital means is crucial to reducing administrative burden on the private sector and on citizens in general by making their interactions with public authorities faster, more convenient and less costly, as well as by increasing the efficiency and the quality of the services provided to citizens and businesses.

Interoperability of European public services concerns all levels of administration: Union, national, regional and local. Besides removing barriers to a functioning Single Market, interoperability facilitates successful implementation of policies and offers great potential to avoid cross-border electronic barriers, further securing the emergence of new, or the consolidation of developing, common public services at Union level. In order to eliminate fragmentation of European services, to support fundamental freedoms and operational mutual recognition in the EU, there must be a holistic cross-sector and cross-border approach to interoperability, which is promoted in the manner that is the most effective, and the most responsive to end-users. This implies that interoperability is to be understood in a broad sense, spanning from technical to legal layers and encompassing policy elements in the field.

Digital Europe Programme foresees to deploy the so-called “Transformation Platform Ecosystem”, which includes the European Digital Service Infrastructures and building blocks (eID, eInvoicing, eDelivery, eSignature, context broker, etc.), interoperability solutions (eHealth patient summary and ePrescription)⁷, as well as the Open Data Platform, which can serve both the public and the private sector.

⁷ <https://ec.europa.eu/cefdigital/wiki/display/EHOPERATIONS/eHealth+DSI+Operations+Home>

EDIHs could serve local and regional public administrations and other public sector organisations that aspire to use the Transformation Platform Ecosystem, to be compliant with the Principles of the Tallinn declaration on E-Government⁸. Furthermore, EDIHs could help public administrations to use other agreed standards and open source solutions, access government platforms or shared infrastructures (offered on the European or MS level), experiment with Artificial Intelligence and Blockchain for real-time policy-making (e.g. traffic optimisation), or help public administrations improve their cybersecurity. In this context, EDIHs could in particular assist public authorities/buyers to fully use the potential of procuring innovation, and bring them into contact with companies that are ready to supply the necessary digital technology solutions ('technology providers'), stimulating further the development of the local ecosystem.

Not all EDIHs will need to support the public sector, but in the overall network, there needs to be a reasonable amount that do.

1.7. Foreseen use cases for networking of EDIHs

Digital Europe will support the European DIH network and EDIH collaboration to, for example, build EDIHs' local capacity to serve more than one region/country, to export a EDIH's excellence, and to connect ecosystems.

- **Exporting / Importing EDIH excellence:** Based on complementary competence and infrastructure, EDIHs can export their specialisation to SMEs in other MS, in the form of opening up their facilities and knowledge to clients outside of its own region. Vice versa, if an EDIH misses certain expertise or facilities to support its own regional clients they can ask the support of other EDIHs who would have this expertise, and that way import expertise offered by other EDIHs. This could be done on an individual basis, starting from the needs of individual customers, but also in a more proactive way where several hubs together combine their knowledge and facilities to develop common services for their stakeholders.
- **Connecting ecosystems:** Just like EDIHs at the local level build ecosystems by bringing into contact actors along the value chain to develop new innovations, at a European level several hubs can connect different ecosystems together by identifying innovation opportunities for users and suppliers coming from different regions. This will help SMEs expand and tap into other markets, develop EU value chains, create new business opportunities for companies or help commercialise earlier innovation experiments or pilots. Also other types of common interest projects (e.g. open platforms, standards, standardised services, shared infrastructure, etc.) in collaboration with companies and stakeholders from the different regions can connect ecosystems and will help avoid unnecessary duplication of investment or give access to infrastructure at a lower cost.
- **Common investments:** Member States and Regions may decide to invest together in common EDIHs. The European Grouping of Territorial Cooperation (EGTC) could be an appropriate legal instrument for such cross-border

⁸ <https://ec.europa.eu/digital-single-market/en/news/ministerial-declaration-egovernment-tallinn-declaration>

cooperation, as it enables regional and local authorities and other public bodies from different member states, to set up cooperation groupings with a legal personality.⁹ Partnerships around related Smart Specialisation priorities that have emerged as part of the three thematic Smart Specialisation Platforms¹⁰, some of which were inspired by the Vanguard Initiative¹¹ collaboration model, could be a starting point for such joint EDIH initiatives.

These activities will lead to hubs learning from each other and therefore greater cohesion in the capabilities of the hubs to help their customers with their digital transformation.

1.8. Relationship with other programmes

Digital Transformation will not only be supported under the Digital Europe Programme, but also through Horizon Europe, and European Regional Development Funds. Furthermore, there will be dedicated financial instruments in InvestEU to support the uptake of advanced digital technologies such as AI and Blockchain. Every programme focuses on particular aspects and there is a clear delineation between them, as explained in the following section (see Figure 4).

Digital Europe programme: This programme is focused on investments in digital capacities, and as such, the funding foreseen for European Digital Innovation Hubs will be directed towards the hubs, with the objective that they invest in their capacity, i.e. latest equipment and facilities as well as employees to deliver services to their stakeholders. All selected hubs will be networked, in order to obtain European added value, in the form of rationalisation of investments and sharing best practices. The selection process will be partly done together with the Member States, and the objective is to ensure a broad geographical coverage across Europe.

Horizon Europe programme: This is the framework programme for Research and Innovation. It is foreseen to continue with activities that were already present in H2020, such as ICT Innovation for Manufacturing SMEs (I4MS). These activities are directed towards companies that work together with Digital Innovation Hubs to experiment and test with novel digital solutions to improve their businesses. Organisations that participate in the test-before-invest experiments will be eligible for funding. European Digital Innovation Hubs may participate to these projects, just like other types of Digital Innovation Hubs or organisations with the appropriate knowledge.

European Regional Development Fund (ERDF) post-2020: Through its policy objective “A smarter Europe by promoting innovative and smart economic transformation”, ERDF programmes may support Digital Innovation Hubs mainly in four ways:

- construction and up-grading via investments in infrastructure, equipment, software and intangible assets,

⁹ https://ec.europa.eu/regional_policy/en/policy/cooperation/european-territorial/egtc/

¹⁰ <https://s3platform.jrc.ec.europa.eu/thematic-platforms>

¹¹ <https://s3vanguardinitiative.eu/>

- research and innovation services for SMEs, including transfer of advanced digital technologies,
- delivering digitalisation services to SMEs and public sector, etc.
- strengthen the regional and local innovation ecosystems including the participation of DIHs in the entrepreneurial discovery processes for smart specialisation.

A prerequisite for investments of ERDF in Digital Innovation Hubs for services under categories “Test before invest (in digital technologies)” and “(Digital) skills and training” is that these are fully supporting the regional or national smart specialisation strategy.

New in the future ERDF programme is that interregional investments are encouraged through a new Interregional Innovation Investment Instrument, called the European Grouping of Territorial Cooperation (EGTC), see Section 1.7. Therefore, several regions (possibly coming from different Member States) may also decide to invest together in Digital Innovation Hubs or use the hubs for developing innovations along shared value chains.

ERDF and Digital Europe Programme can be combined for European Digital Innovation Hubs¹². The ERDF may not be used to fund maintenance and operating costs of DIHs.¹³

European Agricultural Fund for Rural Development post-2020: Based on the post-2020 CAP (Common Agriculture Policy) proposal national and/or regional authorities may use Art. 68-Investments and Art 71- Cooperation to support for various types of digital operations for agriculture and rural development, such as small-scale digital infrastructure, equipment, software and intangible assets, cooperation and innovation services. Therefore, DIHs focusing on agriculture and/or rural development may be funded through these means, and EAFRD may also be used for co-funding EDIHs in these areas, provided there is no double funding of some cost items. The administrative or the electronic crosschecking controls fall under MS responsibility.

InvestEU Programme builds on the successful model of the Investment Plan for Europe, the Juncker Plan. It will mobilise public and private investment using an EU budget guarantee. There will be dedicated financial instruments to support the digital transformation, and in particular StartUps/ScaleUps in the area of AI and blockchain, and the uptake of these technologies by traditional companies. Financial intermediaries such as banks or equity investors will integrate these instruments in their offer.

The foreseen synergy between European Digital Innovation Hubs and InvestEU consists in bridging the knowledge gap between financial intermediaries and companies: from the side of financial intermediaries it is difficult to estimate the risks associated with investments in digital technologies, and from the side of companies it is difficult to estimate costs and expected return on investments.

Therefore, when EDIHs have supported companies to test certain innovations and the companies decide to invest further, the hubs can bring them into contact with the right financial intermediary. The “test before invest” service allows a company to make a realistic return on investment scenario that can help financial institutions to make a better

¹² See Section 2.2 for the co-investment principles for EDIHs.

¹³ The EU outermost regions are exempt from this rule.

decision. It will also be easier for companies to estimate the level of investments they need and to convince the investor that they are appropriately equipped to make the best of the investment.

Next Generation EU – Recovery and Resilience Facility (RRF) will provide to Member States €672.5 billion of loans and grants in frontloaded financial support for the crucial first years of the recovery after the COVID-19 crisis. The Commission proposes that each recovery and resilience plan includes a minimum level of 20% of expenditure related to digital. For the digital transition, particular attention will be paid to the contribution of the measures proposed to the digital transformation of the economic or social sectors including public administration.

Member States can use RRF to financially support Digital Innovation Hubs, either to complement funding from Digital Europe programme or in addition to it.

The document “Guidance to Member States / Recovery and Resilience Plans” (SWD(2020) 205 final) mentions explicitly Digital Innovation Hubs as a mean to support the digitisation of industry and the public sector. Funding provided from RRF is complementary to other funding, as explained in the Article 8 of the proposed regulation (COM(2020) 408 final). “Support under the Recovery and Resilience Facility shall be additional to the support provided under other Union funds and programmes. Reform and investment projects may receive support from other Union programmes and instruments provided that such support does not cover the same cost.”

For further information:

https://ec.europa.eu/info/sites/info/files/3_en_document_travail_service_part1_v3_en_0.pdf

https://ec.europa.eu/info/sites/info/files/com_2020_408_en_act_part1_v9.pdf

Allocated at European level

Horizon Europe: Support to SMEs and mid-caps to experiment with highly innovative digital technologies in a cross-border setting. European Digital Innovation Hubs and others may apply for these grants, and cascade a large part of the funding to SMEs

Digital Europe: Support to the facilities and personnel of the European Digital Innovation Hubs, to build capacity in Europe to diffuse digital innovations across SMEs and administrations.

InvestEU: Incentives and risk reduction programmes to help companies find follow-up investment to further complete their digital transformation. The work of the digital innovation hubs will diminish the knowledge gap that exists.

Allocated at national level

European Regional Development Fund: Investments allocated by the Member States to build-up or strengthen the Digital Innovation Hubs infrastructures in their territories and reduce the digital divide. ERDF can be used by Member States to co-invest on EDIHs in Digital Europe.

European Agriculture Fund for Rural Development: Investments allocated by Member States to foster knowledge transfer and innovation in agriculture, forestry and rural areas. EAFRD can be used by Member States to co-invest on EDIHs in Digital Europe.

2. IMPLEMENTATION OF EUROPEAN DIGITAL INNOVATION HUBS

This chapter will focus on design principles of the EDIHs. It especially highlights some principles that are put forward in the draft regulation or that have been discussed with the Member States in one of the preparatory meetings.

2.1. Size of the network of European Digital Innovation Hubs

The draft regulation states that the “*network of European Digital Innovation Hubs should ensure a broad geographical coverage across Europe and should also contribute to the participation of the outermost regions in the Digital Single Market*”.

Digital Europe Programme is an investment programme in digital capacities and wants to make an impactful contribution to the capacity of European Digital Innovation Hubs. The Commission therefore proposes to invest between 0.5 and 1M€ per year in each hub. Together with the contribution of the MS, this would add up to a significant investment between 1 and 2 M€ per year per EDIH. With the current budget proposal for Digital Europe, it is foreseen to support between 100 – 200 hubs in the EU, with at least one hub per Member State. These numbers will be adapted once the final budget is agreed with the European Council and Parliament.

For the geographical distribution, it is proposed to leave maximum flexibility to the Member States. Every Member State will get as a maximum amount of co-funding of the EDIHs in their country a pre-defined share of the overall funding available for EDIHs in Digital Europe Programme, see Section 3.2.1. They subsequently get the opportunity to designate a number of hubs, geographically spread over their territory, that respond to the demand of private and public sector while taking into account existing assets of the country. Member States may propose special measures for the outermost regions. Depending on the needs of individual hubs, it can be decided to invest more in some and less in others.

2.2. Co-investment principles

To operate a European Digital Innovation Hub it is necessary that there is (access to) a state-of-the-art physical infrastructure (a building to receive customers, training facilities, showroom / demonstration facilities, testing and experimentation equipment and facilities) that supports the objectives of the hub. Furthermore, qualified personnel is needed to provide services to SMEs and/or public sector organisations.

Member States (possibly together with their industry (see Section 2.4)) and the European Commission will both invest in the European Digital Innovation Hubs. Digital Europe Programme foresees funding in the form of a grant, for a duration of 3 years with the possibility of reapplying at the end of the grant duration, for an additional period of 4 years. After the duration of the grant(s), the capacities built up with the support of the Digital Europe Programme are expected to remain available to SMEs and/or public sector organisations. It is not necessary to achieve full commercial sustainability after the end of the project. Since Digital Europe Programme is a capacity-building programme,

the Member State contribution should also aim at supporting capacity building of the EDIH¹⁴.

Specific cost items that could be funded through the Digital Europe grants

- Procurement and/or depreciation costs for equipment and facilities, both hardware and software
- Qualified personnel of the EDIH for delivering digital transformation services to SMEs or public administrations, including subcontracting for specialists
- Travel grants for hub personnel and local stakeholders to work with other hubs

The Digital Europe grant will fund 50% of the requested amount, capped by the limits explained in section 3.2.1. Member States (or their regions) should contribute at least an equal amount, either in-kind or in-cash, leveraging private funding if necessary. The proposal for the grant needs to justify the requested funding in terms of their expected KPIs on activities with European added value and their expected impact.

Several situations can occur:

- Member States have already built up Digital Innovation Hubs in the past, and want to designate these for Digital Europe Programme: MS can contribute with cash, or in-kind by contributing e.g. personnel or depreciation of previous investments in the hub. If the support was covered by article 27 General Block Exemption Regulation, please note the 10 years' time limit for operating aid.
- There is no Digital Innovation Hub yet in the region, and MS will invest in it during Digital Europe Programme. In this case, MS can again contribute in-kind or in cash with the foreseen investments in the hub. If the project on the MS side has a different timing than Digital Europe, a grace period of 1 year is foreseen. At proposal stage, it must only be proven that MSs/regional co-investment is requested. Upon selection, the grant will be signed after the corresponding MS/regional contribution is made available.

2.3. Compliance with state aid

Since the selection procedure of EDIHs gives some degree of flexibility and discretion to the Member States, and Member States are also financing (up to) 50% of the EDIH, the Member State's investments/grants in the hubs need to be considered as a State aid, while the part covered for by industry or by Digital Europe Programme does not constitute State aid. It is therefore important to be exempted from State aid notifications though the General Block Exemption Regulation (GBER), which will reduce the administrative burden and accelerate the process of setting up and financings EDIHs. The

¹⁴ Some countries are investing in innovation voucher schemes for SMEs. These cannot count for the 50% co-funding of MS, because there would be a risk that the EDIHs are double funded in the context of State aid. Of course countries can still have innovation voucher schemes, but services delivered by the EDIHs in the context of the grant of Digital Europe Programme cannot be funded through innovation vouchers, since they have already been subsidised through the grant.

DEP-grant is used to reinforce the hub, i.e. to invest in facilities and in personnel. From a DEP perspective, the total amount (i.e. the Member State, industry and DEP contribution) needs to be passed on to SMEs and public sector organisations in the form of open, accessible services, regardless if the funding falls under State aid rules. Several Articles in GBER play a role: Innovation Clusters (Art 27 GBER) and Aid for Innovation Advisory Services (Art 28 GBER). However, it is also possible to use other articles at the level of the user, such as “De minimus” or Article 25 GBER (Aid for research and development projects). From a State aid perspective, the total amount of Member State financing/grants need to be passed on.

1. EDIHs are compatible with the Innovation Clusters definition

EDIHs as defined in Digital Europe Programme are compatible with the innovation cluster definition Art 27 (9) GBER ‘Innovation clusters’. These are defined as structures or organised groups of independent parties (such as innovative start-ups, small, medium and large enterprises, as well as re-search and knowledge dissemination organisations, non-for-profit organisations and other related economic actors) designed to stimulate innovative activity through promotion, sharing of facilities and exchange of knowledge and expertise and by contributing effectively to knowledge transfer, networking, information dissemination and collaboration among the undertakings and other organisations in the cluster.

According to GBER, the maximum State aid per cluster (for its whole lifetime) should be below 7.5M€ (Art 4(1)(k) GBER). The DEP and MS funding does in principle not affect that amount, as the State aid is passed on, there will be no State aid to the cluster/EDIH.

Art 27(2) explains that Aid for innovation clusters shall be granted exclusively to the legal entity operating the innovation cluster (cluster organisation). In the context of EDIH, these are the beneficiaries of the DEP grant. In other words, a consortium of legal entities with a consortium agreement detailing the responsibilities and obligations of all partners as regards cluster operation modalities is sufficient.

Art 27(4) explains that the fees charged for using the cluster's facilities and for participating in the cluster's activities shall correspond to the market price or reflect their costs. SMEs can benefit from free or reduced price access or services in line with conditions set down in Art. 28 GBER, as explained below. Also public sector organisations can benefit from free or reduced price access or services, but only for their non-economic activities. EDIHs may also be open to large enterprises and public sectors organisations pursuing an economic activity. However, only SMEs can benefit from their services free of charge or at reduced price, large enterprises and public sectors organisations pursuing an economic activity would need to pay the full price.

Every EDIH should in their proposal draw up a price list for all their services, based on market prices if these exist. If these do not exist, they should be based on costs incurred by the EDIH in providing these services (e.g. a share of the investment and operational costs for which aid was received). The price list would apply to all stakeholders, but only large enterprises and public sector organisations pursuing an economic activity would need to pay according to the price list. SMEs and public sector organisations pursuing non-economic activities could receive the services for free or at reduced costs. For DEP, the methods to calculate the market price used in the price list and/or the cost of the services must already be made in the proposal so that the external experts can evaluate its validity and appropriateness.

2. All state aid should be passed on to the SMEs and certain public sector organisations

All the services provided by the EDIH free of charge or at a subsidised price should be in line with Art 2 (94) and (95) GBER: ‘innovation advisory services’ means consultancy, assistance and training in the fields of knowledge transfer, acquisition, protection and exploitation of intangible assets, use of standards and regulations embedding them, and ‘innovation support services’ means the provision of office space, data banks, libraries, market research, laboratories, quality labelling, testing and certification for the purpose of developing more effective products, processes or services;

In Art 28 (4) the GBER states “In the particular case of aid for innovation advisory and support services the aid intensity can be increased up to 100% of the eligible costs provided that the total amount of aid for innovation advisory and support services does not exceed EUR 200.000 per undertaking within any three year period. ” On this basis, any SME would be allowed to use the above services/functions for free or at reduced price up to a maximum value/aid element of €200,000. In the Commission’s view, this €200,000 per SME over a three-year period is well above the expected level of aid. In fact, we expect that a typical SME would stay below 50.000€/three year period. If an SME receives innovation advisory services from other sources, it would need to take that into account when calculating the 200.000€ limit. Alternatively, the SMEs/MS could also consider that the free or reduced services to SMEs are considered de minimis, in case that is preferable to considering the services as innovation advisory and support services. It is also possible to make use of the possibilities of Art 25 GBER.

It is up to the EDIH to determine if they want to provide services for free or at a subsidised price. If a price is charged, this has the benefit that the customer is more consciously choosing to make use of the service, and therefore the capacity of the EDIH is used for organisations that really need it and are ready to pay for it. EDIHs can also decide that, after the initial services of the hub have been used, SMEs would have to pay a fee at market prices when they want to make use of follow up services. In order to avoid the administrative burden of public procurement processes, it is however highly recommended to provide services to public sector organisations pursuing non-economic activities for free. Please note that there is, per definition, no State aid at the level of public sector organisations pursuing non-economic activities. If a public sector organisation carries out both economic and non-economic activities, separation of accounts is also necessary in order to ensure that the economic activity does not receive a free service.

As explained, to be in line with the State aid GBER exemptions, all aid received by the EDIH should be passed on SMEs and public sector organisations pursuing non-economic activities. This concerns 100% of the grant. However, for monitoring purposes at the level of the end-users (the SMEs) only the part which is provided by the State needs to be taken into account.

To determine the value of the aid to the SME, the price list will be used, and the amount of state aid included in each service. Suppose the DEP grant will be financed for 40% by a State, 50% from DEP, and 10% from industry. Suppose service A costs 45, service B 15 and service C 30. An SME receives these services for free. In that case, the state aid for the SME is respectively 18 ($=0,40*45$), 6 ($=0,40*15$), and for service C 12 ($=0,40*30$). The SME will be informed about the amount of State aid included in the free service, such that it can calculate if it reaches the 200k€ limit of Art 28 GBER or any other article that is used to exempt the SMEs. If an SME pays a reduced price, the State

aid is calculated on the reduction. In example A, the state aid of a free service is 15. If the SME would pay 5 instead of receiving the service for free, the State aid would be $(15-5=)$ 10. Please note that if a SME receives funding from other national programmes the granting authorities need to ensure that cumulating rules as specified under State-Aid rule are respected.

2.4. Investments from the private sector

The draft regulation mentions: *“European Digital Innovation Hubs should be allowed to receive contributions from Member States, participating third countries or public authorities within them, contributions from international bodies or institutions, contributions from the private sector, in particular from members, shareholders or partners of the European Digital Innovation Hubs, revenues generated by the European Digital Innovation Hubs’ own assets and activities, bequests, donations and contributions from individuals or funding including in the form of grants from the Programme and other Union programmes”.*

If a Member States decides to co-invest together with the private sector in the European Digital Innovation Hubs it will be necessary to ensure that the access to the EDIH is open to all users and is granted on transparent and non-discriminatory terms. Furthermore, under State aid rules, an investor that finances at least 10% of the total investment costs may be granted preferential access under more favourable conditions but to avoid over-compensation such access must be proportional to the undertaking’s contribution to the investment costs (and these conditions must be made publicly available). It is also strongly encouraged that Member States use competitive open calls to select potential private co-investor(s) and to test market’s interest in co-investing in a project, thus also avoiding a situation where one private investor/technological solutions would be privileged while other potentially interested private investors would have been discriminated.

In order to avoid the situation where an EDIH is financed by only one investor who has control of EDIH’s activities we recommend that more investors contribute in supporting the EDIH, or alternatively if there is only one private investor, the value of the controlled activities by this investor should not go beyond 20%.

The private sector could for instance provide equipment and software that SMEs can use during “test before invest”, or they can sponsor the EDIH with a cash or in-kind contribution.

2.5. EDIHs have a focus/expertise

The draft regulation mentions: *“European Digital Innovation Hubs will serve as access points to latest digital capacities including high performance computing (HPC), artificial intelligence, cybersecurity, as well as other existing innovative technologies such as Key Enabling Technologies, available also in fablabs or citylabs.”*

Hubs are embedded in a local economy¹⁵ and have as an objective to strengthen it by supporting the digital transformation of the local industry and public sector. If for

¹⁵ “Local” should not be interpreted in a narrow geographical sense. What is meant is the “natural” scope of the EDIH.

instance manufacturing is important, the hub could support the companies in adopting Industry 4.0 and circular economy methods. Traditional ICT methods like simulation and supply chain integration will play an important role, and these are becoming more and more based on AI and HPC. Also by introducing digital manufacturing, cybersecurity becomes a prerequisite. This particular hub would therefore have as a focus Industry 4.0/circular economy, using AI, HPC and/or Cybersecurity.

Another example would be a hub in a local economy where construction is important. The potential for digitalisation of the construction sector is very high, since many tasks are still carried out in a manual way. The hub could work with the sector and let relevant companies test brick-laying robots or exo-skeletons, and that way introduce AI in the sector. Figure 5 shows other examples.

DEP	Other Technologies	Application areas	Sector
AI, HPC, or Cybersecurity	Simulation Supply chain integration Blockchain, Advanced Materials, ...	Industry 4.0 Circular economy	Manufacturing
	Remote sensing, Photonics, Life- Science Technologies, ...	Precision farming	Agri-food
	Robotics, Simulation, ...	Automated building, Cobots (collaborative robots)	Construction
	Digital solutions for governments Blockchain, ...	Services for citizens, once- only principle	Public administration

Figure 5. EDIH focus

In general, based on the local strengths available and the future needs of the local industry or public sector, (which could for instance be identified via an entrepreneurial discovery process for the relevant Smart Specialisation Strategy) every EDIH should have or develop a dedicated focus with corresponding expertise during the lifetime of its funding. This should include one or more of the key digital technologies supported under DEP, as these are prerequisites to the digital transformation of the economy and society. Basic competences around these technologies are required, but during the Programme there will be ample opportunities to build up more in-depth knowledge through cooperation with complementary hubs and the specialist projects of Digital Europe Programme. If ERDF is used for co-financing, the specialisation of the hub has to be in line with the smart specialisation of that region. Hubs should also help companies to evaluate the environmental consequences of using digital technologies. Similarly, EAFRD may be used for co-funding EDIHs focusing on agri-food and digitalised agriculture in general.

In case of a very low digital maturity of the companies or public sector organisations targeted by the hub, the hub should adapt its services to first deliver the basic services

needed. However, the hub should also offer gradually more specialised services to their stakeholders since also they should benefit from advanced services. In any case, the focus and expertise of a hub should follow the needs of its local stakeholders.

It is important that not all hubs will have the same focus, but that they complement each other across Europe and address the needs of Europe's economy. Member States therefore need to work together with each other, their hubs and regions to get an efficient coverage of technologies and sectors. The selection process (see Section 3.2.4) will provide a mechanism to ensure such a diverse coverage.

Given the importance of Artificial Intelligence and its wide applicability in all sectors, we expect that at least one of the hubs selected in each country will have expertise in AI, in order to support the most common usages of AI. Most Member States have also signed in 2019 the Digital Declaration on smart agriculture and rural areas, see Annex 7, where Digital Innovation Hubs play an important role. These hubs may become European Digital Innovation hubs with a specialisation on digitalised agriculture.

While hubs are strongly linked to the local economy, and should ensure that they are a first contact point for the local industry and public sector, this does not mean that they cannot have customers from other regions of Europe.

As an example, in case a local hub does not have the technical or business competences needed to support an SME, they can help the SME to get in touch with a second hub possibly in a different Member States, and then help them to “bring back home” the acquired expertise. The European network of hubs will avoid unnecessary duplication of efforts and competences by making these exchanges easy, thus potentially allowing hubs to support customers from other regions and Member States. Further information on this subject can be found in the conclusions, Chapter 4.

2.6. Mechanisms for networking / collaboration: the Digital Transformation Accelerator

Figure 6 summarises the knowledge transfer in Digital Europe Programme and the networking of the EDIHs, which were explained in Section 1.5 and 1.7. The organisation of this collaboration will be supported through a central node called “Digital Transformation Accelerator”. This name signifies the importance of this action: it should animate all networking and collaboration activities and through that accelerate the digital transformation everywhere in Europe. For instance, this central node will animate the network with networking events, training the hubs, best practice sharing, create an interactive map of digital capacities and collaborate with other DIHs not funded by DEP.

Figure 6. Schematic overview of the role of EDIHs in Digital Europe Programme.

The Digital Transformation Accelerator is funded independently from the EDIH grants, through a procurement contract, and possibly could take the form of an “office” in Brussels. All legal entities that want to carry out this work are in principle eligible. At the moment, the following support activities are foreseen:

- **Guidance for hubs:** this may include guidance to set up new hubs, re-usable support tools (templates, webinars, guidelines, good practices, reusable capacities, etc.), carefully selected good practice cases, twinning programmes, etc.
- Manage and maintain an **interactive catalogue** of European Digital Innovation Hubs and other digital capacities funded in Digital Europe Programme.
- **Train the trainer:** developing ways to transfer the knowledge generated in the HPC, AI and Cybersecurity following the Specific Objectives to the EDIHs and vice versa, for instance by organising regular training workshops. This should allow EDIHs to diffuse this knowledge further to their own stakeholders, and ensure wide use of the capacities of Digital Europe (see also Section 1.5).
- **Community building:** this may include community building events between groups of EDIHs (geographical, similar focus, etc.), engaging with DIHs that are not part of the European DIH network¹⁶). These activities should in particular set

¹⁶ The draft regulation mentions: “The European Digital Innovation Hubs should develop appropriate synergies with Digital Innovation Hubs funded by Horizon Europe or other R&I programmes, the European Institute of Innovation and Technology, in particular the EIT Digital and also with established networks such as the European Enterprise Network or the EU Invest hubs”

up links with DIHs focused on agriculture, health or public administration. See Annex 7 for more information about a declaration most MS signed on investments in digitalising agriculture.

- **Matchmaking:** this may include organising matchmaking events where needs for specific competences are advertised and matching hubs may be found. Such matchmaking should be supported by a digital matchmaking marketplace.
- Train the EDIHs about special financial instruments in **InvestEU**.
- Make available all information about **short term training courses** in advanced digital skills pillar of DEP, so that EDIHs can motivate their stakeholders to apply for these courses.
- Connect to initiatives like **Start up Europe** to help digital innovative companies/startups working with the EDIHs to scale up.
- Make available information about further funding mechanisms for SMEs in **Horizon Europe**.
- Putting the activities of the EDIH in the wider context of other relevant EC policies, and **engagement with Regional and National policy makers**.
- The Accelerator will also manage the **media presence** of the network, encouraging and coordinating the presence of EDIH on the web and on other media as needed.
- **Impact assessment:** this may include analysis of indicators and KPIs, developing targets, generating new knowledge to support benchmarking and policy recommendations.
- **International collaboration:** If DIHs in other part of the world would like to collaborate with like minded EDIHs

These support activities should be carried out with close guidance from the EC officials responsible for the programme. The support activities will be essential for bringing together all parts of the Digital Europe Programme, and ensuring that the investments in the network of EDIHs will have the European added value that is expected.

2.7. Performance monitoring and KPI's

All European Digital Innovation Hubs that receive a grant will be required to produce an activity report and a description of the extent to which they fulfil their KPI targets. Furthermore, there will be regular on-site reviews with external experts to monitor performance. MS can be involved in this process, by e.g. proposing external evaluators, being present during the review or read the reports.

As EDIHs have similar objectives regarding supporting SMEs and/or public sector administrations in their digital transformations, all hubs are requested to use a set of common KPIs. In addition, EDIHs could have additional KPIs that are specific to the particular characteristics and objectives of the hubs.

The mandatory KPIs are listed below:

Overall outputs

- Number of businesses and public sector entities, which have used the European Digital Innovation Hubs' services, by user category (businesses of different sizes, public sector entities, etc.), sector, location and type of support received. The types of services covered by this indicator are:

- Information services (e.g. participation to events)
 - "Test before invest" activities allowing beneficiaries to test technologies;
 - Access to finance;
 - Training activities;
 - Networking activities;
- For "test before invest" services, further breakdowns for technology tested (AI, HPC or cybersecurity)", including whether Digital Europe capacities (HPC, AI, Cybersecurity, Advanced digital skills, Digital Service Infrastructure, ...) were used.
 - For access to finance: Amount of additional investments successfully triggered (e.g. through venture capital, bank loan, etc.)
 - For collaboration:
 - N° of Collaborations with other EDIHs and stakeholders outside the region at EU level. Increase in %
 - N° of Infrastructures jointly shared / joint investments. Increase in %

Impact KPIs (achieved within the SMEs/public administration supported):

- Digital maturity evolution of the entities that have been supported by the European Digital Innovation Hubs.

Digital maturity will be defined on the basis of a questionnaire that asks an organisation how they are dealing with the following categories:

- INTELLIGENCE: Are intelligent systems used for decision making that understand and adjust to the specific circumstances? Are there systems that can predict and plan in a way that improve quality and optimise capacity?
 - CONNECTIVITY: Is it possible to access data in a secure and real-time manner? Are systems and machines exchanging data, do they form an integrated part of the business processes?
 - FLEXIBILITY: Is it possible to adapt and customise the systems and business processes to specific needs so that personalised products can be produced at mass-production prices?
 - AUTOMATION : are repetitive tasks automated in a reliable way.
 - SUSTAINABILITY Are natural resources used in a sustainable way, not wasting precious resources, and is no harm done to the environment and quality of life of the citizens?
 - SERVICES Are new business models used where products are offered as a service?
 - SOCIAL Are the workers motivated and engaged and can they carry out their work in an autonomous manner when working with the new systems?
- Through the Innovation Radar¹⁷:
 - the market maturity of innovations ("Market Maturity Indicator");
 - the market creation potential of any given innovation ("Market Creation Potential Indicator")

¹⁷ the JRC's Innovation Radar methodology (already deployed in Digital and non-digital themes of Horizon 2020, EIC Pilot as well as in DG ENV's LIFE programme) will be used to assess the impact of "Test before invest" and "Support to find investments" services of EDIHs.

3. ACCESS TO DIGITAL EUROPE FUNDS

This chapter explains in detail how the selection process and the grant agreements will be designed.

3.1. Grants

The draft regulation states that “*Where European Digital Innovation Hub receives funding under this programme the funding shall be in the form of grants*”.

The grant will cover the beneficiaries’ direct and indirect eligible costs. The latter is foreseen to be 7% of the direct costs.

The direct costs can cover purchase of hardware or software, depreciation of hardware or software, personnel costs of the EDIH for delivering digital transformation services to SMEs or public administrations (including subcontracting), and travel costs for hubs and local stakeholders to work with other hubs.

These costs must be estimated in the proposals, via a description of costs per activity and per beneficiary.

Every 12 or 18 months the activities executed by the EDIH will be assessed through a review of the project; after a successful assessment, the relevant actual costs will be claimed and will be paid to the consortium. A suitable pre-financing mechanism will be foreseen so that the hub will be sufficiently resourced at the beginning of the grant.

In order to estimate the amount of state aid that will be passed on the SMEs, all proposals should also contain a price list for the services provided, representing the "value" of their services, and an estimation of how many customers will use these services. In the absence of market prices, this price list may be calculated on the efforts and investments and an according quantity structure. The price list would apply to all customers, but SMEs and public sector organisations for their non-economic activities would be able to use the services free of charge or for a reduced price up to the upper Art 28 (4) limit of 200.000€ of the GBER. For follow up services or other services than mentioned in the price list, SMEs would have to pay a fee at market prices as well.

3.2. 2-step selection process of the hubs

Section 2.5 explains that Member States define regional coverage and aim for complementarity of the specialisations of the hubs. The text below and Figure 7 explains how the EDIH network will be set up in the first years of the programme to reach approximatively 100-200 hubs.

- The first step consists of a call for expression of interest, resulting in the creation of a list of designated hubs in each Member State. MS are requested to provide the relevant information using two on-line forms, the first one to provide the general information about the number of hubs, the budget and the planned

timeline of actions, and the second one to provide specific information for each hub.

The content of the forms is available in the annex to this document. In due time, both forms will be made available on line and the access credentials provided only to representatives of Member States.

- In parallel, the European Commission will invite the designated hubs to respond to a restricted call for proposals with a certain deadline. To be eligible, the proposals submitted to the restricted call will have to provide proof that they have been designated by the relevant Member State, attaching a specific declaration to the proposal text, (see Annex for the declaration text).
- The eligible proposals will be evaluated and all those above threshold will be ranked; Member States will endorse the ranking of the proposals.
- Finally, the selected proposals will get a grant from the European Commission and the initial payment (pre-financing) will be disbursed.

The text above describes the **first restricted EDIH call**, planned for the 1st quarter 2021. After the call, 3 different outcomes will be possible in terms of allocation of funds:

- 1) All the eligible proposals from designated hubs are evaluated “above threshold” and consume all the budget available for the Member State. In this case, no further actions will be needed.
- 2) Some of the eligible proposals are evaluated as above threshold, but there is not enough budget allocated in DEP to the Member State to fund them. In this case, the Member State could decide to fund those proposals through other means, e.g. by using RRF funds or national funds. As long as the proposals were evaluated above threshold in the European restricted call, also these will be considered as part of the EDIH network.
- 3) Finally, it is possible that not all the DEP budget allocated to a Member State is consumed because some eligible proposals are evaluated below threshold. The designated hubs that submitted below-threshold proposals will get a second opportunity through a **second restricted EDIH call**, open only to them, to which they can submit an improved proposal. This second restricted call is planned for the 4th quarter 2021 and will be managed like the first one, resulting eventually in the selection of further hubs.

The proposals selected in the first call, plus the proposal possibly selected in the second restricted call will make up the initial network of European Digital Innovation Hubs. (Article 16 of the draft regulation: *During the first year of the implementation of the Programme, an initial network of European Digital Innovation Hubs, consisting of at least one hub per Member State, shall be established. For the purpose of the establishment of the network, each Member State shall designate, in accordance with their national procedures, administrative and institutional structures candidate entities through an open and competitive process*).

If after this process there are still gaps in the coverage of the network of EDIHs, open calls may further complement the network

	Member States	European Commission	Candidate Entities
first restricted EDIH call			
1	Designate candidate entities through an open and competitive process Designate candidate entities through an open and	Launches an Expression of Interest to Member States Launches a restricted call for proposals	
2			Submit proposals, including proof of being in the list of designated entities
3		Evaluates proposals with external experts

7		Publishes the list of hubs making up the initial network of EDIHs	

Figure 7. 2-step selection process of EDIHs

3.2.1. Expression of interest to Member States

All Member States are requested to designate a number of potential EDIHs geographically spread over the country, that respond to the demand of industry and public sector while taking into account existing assets of the country. They have to be selected through an open and competitive process in accordance with their national procedures, administrative and institutional structures. This process can have happened in the past, but not before 1 May 2016.

The draft Expression of Interest text is the following:

Objective

The objective is to obtain a list of candidate European Digital Innovation Hubs, proposed by Member States, which will be allowed to respond to the restricted calls for the Initial Network of European Digital Innovation Hubs.

Scope

All Member States are requested to designate a number of potential EDIHs geographically spread (in case a Member State will have more than one EDIH) over the country, that respond to the demand of industry and public sector while taking into account existing assets and National priorities. They have to be selected through an open and competitive process in accordance with national procedures, administrative and institutional structures. This process can have happened in the past, but not before 1 May 2016.

Member States are invited to designate a number of potential EDIH included between the minimum and maximum numbers mentioned in the table. However, Member States are free to designate a different number of hubs according to their specific geographical and sectoral needs. Member States can also designate more hubs than what could be funded in order to raise the competition during the restricted call process. The total amount of funding foreseen in the budget table for one country will be the maximum amount of co-funding foreseen in Digital Europe Programme for all EDIHs of that Member States during the duration of the Programme.

Several MS can propose together cross-border trans-national hubs, serving neighbouring regions in different countries.

Designated candidate EDIHs should have:

- appropriate competences related to the functions of the European Digital Innovation Hubs defined above;
- appropriate management capacity, staff and infrastructure necessary to carry out the functions defined above;
- operational and legal means to apply the administrative, contractual and financial management rules laid down at Union level;
- appropriate financial viability, corresponding to the level of Union funds they will be called upon to manage and demonstrated, where appropriate, through guarantees, issued preferably by a public authority.

Given the importance of Artificial Intelligence and its wide applicability in all sectors, the European Commission expects that at least one of the hubs designated in each country will have expertise in AI.

As a proof of their designation, Member States should provide a letter to all designated potential EDIHs declaring that they have been selected by the Member State to participate in the restricted calls. Potential EDIHs should attach this letter to their application.

Country	Population	EP seats 2020	Projected budget (1000 €)	Min # of hubs	Max # of hubs (recommended)	NUTS 2 regions	Budget per year (1000 €)

Table 1: Foreseen distribution of funding of Digital Europe Programme for EDIHs in all MS, based on the proposed budget by the Commission. This will be adapted once a decision about budgets have been taken.

3.2.2. Restricted Call by the European Commission

The European Commission launches a restricted call for proposals open to all the potential EDIHs which have been designated by their MS. The draft evaluation criteria are described in Section 3.3.

Proposals will have to include proof that the EDIH is designated and will be co-funded by the MS.

In parallel, each Member State will provide to the European Commission a list of the designated hubs; this list will be used to brief the proposers on the restricted call process. They will be invited to networking events, and there will be electronic means to network with other hubs, for instance through the DIH Catalogue (it is proposed that the catalogue will have the functionality to see which hubs have been designated by Member States) and through the DIHNET Community Platform. This should allow DIHs to write quality proposals, to start collaboration with other hubs, and to propose relevant collaboration ideas already in their proposals. Such initial ideas can be extended during the project's lifetime. For DEP funding, all designated hubs have to submit a proposal before a certain deadline.

The draft call text is the following:

3.2.3. Initial Network of European Digital Innovation Hubs

Objective

Select the initial network of European Digital Innovation Hubs (EDIH) from all designated candidate entities resulting from the Expression of Interest (2.1.1). Upgrade these entities to provide the complete set of services of an EDIH, including the necessary infrastructure, in a specific geographical area, covering the needs of the local SMEs and/or public sector organisations with respect to their digital transformation. Network these EDIHs with each other and with other projects selected in Digital Europe Programme developing capacities in High Performance Computing, Artificial Intelligence, Cybersecurity, Advanced Digital Skills and accelerating the best use of technologies.

Scope

Each EDIH will provide services based on a specific focus/expertise, which will support the region's industry and public sector with their digital and green transformation. This specialisation can be strengthened over time.

Each EDIH will act as access point to the European network of EDIHs, helping local companies and public actors to get support from other EDIHs in case the needed competences fall outside the competence of the local EDIH, ensuring that every stakeholder gets the best support, wherever it is available in Europe. The EDIHs will be active in networking with other hubs, sharing best practices and specialist knowledge, bringing companies into contact with other companies of their value chain, with innovators, or with early adopters that want to test solutions. EDIHs will also play a brokering role between public administrations and companies providing e-government technologies. In all the networking activities, EDIHs will be supported by the Digital Transformation Accelerator (see 2.1.3).

Each European DIH should make available the relevant experimentation facilities related to its specialisation. SME and the public sector will be able to test the technologies

proposed, including their environmental impact, and the feasibility of applying these technologies to their business before further investing in it.

Furthermore, they should act as a multiplier and widely diffuse the use of all the digital capacities build up under the different specific objectives of the Digital Europe Programme on High Performance Computing, Artificial Intelligence, Cybersecurity, Advanced Digital Skills and accelerating the best use of technologies. For this purpose, the EDIHs should participate to a “Train the trainer” programme where the specialists of the digital capacities train the EDIHs on how to use the capacities, so that the EDIHs can help their stakeholders to make use of them. The “Train the trainer” events will be organised by the Digital Transformation Accelerator, but EDIHs should foresee participation to this event in their budget.

EDIHs will maintain structured long-term relationships with the relevant local actors like regional authorities, industrial clusters, SME associations, business development agencies, incubators, accelerators, chambers of commerce, and partners of the European Enterprise Network (EEN). Specifically, EDIHs will offer a seamless service with EEN and startup Europe, e.g. by offering joint investor-related events, organising common trainings, workshops or info days, directing SME from EEN to EDIHs and from EDIHs to EEN as needed.

Finally, EDIHs will act as interface with the European Commission to support the implementation of specific sectorial policies, SME policies and eGovernment policies. This will imply that EDIHs specialised in a specific sector might be called by the EC for input for policies related to that sector, and that they might be asked to participate to specific actions for that sector.

The services provided by the EDIH are exempted from State Aid as long as they correspond to Article 28 GBER: Aid for Innovation Advisory Services. In Art 28 (4) the GBER states “In the particular case of aid for innovation advisory and support services the aid intensity can be increased up to 100% of the eligible costs provided that the total amount of aid for innovation advisory and support services does not exceed EUR 200.000 per undertaking within any three year period.” On this basis, any SME would be allowed to use the EDIH services/functions for free or at reduced price up to a maximum value/aid element of €200,000. Therefore, in their proposal, each EDIH should present a price list, based on market prices if these exist. If these do not exist, they should be based on costs incurred by the EDIH in providing these services (e.g. a share of the grant received). The price list would apply to all stakeholders, but only large enterprises and public sector organisations pursuing an economic activity would need to pay according to the price list. SMEs and public sector organisations pursuing non-economic activities could receive the services for free or at reduced costs, as long as the limit of EUR 200.000 per three year period is respected.

Outcomes and deliverables

At the end of the project, a balanced network of EDIH will cover all regions in Europe, addressing the needs of the public and private sectors, including all economic sectors, offering a wide range of specialised digital transformation services.

A set of Key Performance Indicators will be collected and analysed with the support of the Digital Transformation Accelerator:

- Increase in digital maturity of organizations that have used the services of the EDIH network. Digital maturity will be defined on the basis of a questionnaire assessing the

categories of intelligence, connectivity, flexibility, automation, sustainability, servitisation, social aspects. The sustainability category will focus on the use of digital technologies to improve environmental sustainability.

- Market maturity and market creation potential of innovations, as defined in the JRC's Innovation Radar methodology

Type of action

Simple grants, Cross-border EDIH are possible; in this case, each Member State involved will provide the co-financing for participants legally established in their country.

3.2.4. Evaluation process after the deadline

All proposals will be evaluated by an evaluation committee, comprising independent external experts, using the selection criteria described in Section 3.3. For the selection of evaluation experts the EC will consult the Member States.

After the technical evaluation of the proposals for a specific grant, a strategic assessment will follow where the European Commission taking into account advice of the Member States will rank all the proposals above threshold in a list based on score, geographical coverage and specialisation coverage. The European Commission will make the final selection for funding in the first year by taking from the ranked list the highest-ranking proposal from each Member State, taking into account the maximum amount of funding available¹⁸. This procedure is repeated until all the budget is allocated or until all MS have reached their share. This should result in an initial network covering the needs of industry and areas of public interest with a comprehensive and balanced geographical coverage.

To allow to fund the greatest number of EDIHs in the first year, it is considered to use “multi-annual instalments”. This is a mechanism to fund longer term projects in slices of one year, each one drawing on the foreseen budget for that year.

3.2.5. Extending the initial network

The first work programme of Digital Europe will cover the first two years, 2021-2022. For year 3 there will be another work programme. If the designation of the MS and the restricted calls did not result in a full coverage of the network and there are still gaps in the network, year 3 will launch an open and competitive process to fill the gaps to reach the final network, taking into account the share of (funding for) EDIHs per Member State. In this process, the eligibility and award criteria will be the same as for year 1.

¹⁸ The initial network will be evenly spread over all MS, according to their foreseen ratio of EDIHs, and with a minimum of 1 EDIH per MS.

3.3. Award criteria used for restricted call

The Digital Europe Regulation stipulates that *the award criteria shall be defined in the work programmes, and shall take into account at least the following elements:*

- a) Maturity of the action in the project development;*
- b) Soundness of the implementation plan proposed;*
- c) The need to overcome financial obstacles such as the lack of market finance.*

The following elements shall be taken into account where applicable:

- a) the stimulating effect of Union support on public and private investment;*
- b) the expected economic, social, climate and environmental impact;*
- c) accessibility and ease of access to respective services;*
- d) a trans-European dimension;*
- e) a balanced geographical distribution across the Union including bridging geographical digital divide, including the outermost regions;*
- f) the presence of a long-term sustainability plan;*
- g) the freedom for re-use and adaptation of the projects' results;*
- h) synergy and complementarity with other Union programmes.*

The proposal is to use similar award criteria as in the CEF programme, and arrange the different evaluation elements under three criteria: 'Relevance', 'Implementation' and 'Impact', further described below. Note that these draft criteria are meant to be used throughout the whole Digital Europe Programme, and not only for the European Digital Innovation Hubs. An overview of admissibility and eligibility criteria are provided in Annex 8.

Relevance

- Alignment with the objectives and activities as described in the Work Programme and in the call for proposals
- Contribution to long-term policy objectives, relevant policies and strategies, and synergies with activities at European and national level
- Extent to which the proposal can overcome financial obstacles such as the lack of market finance

Implementation

- Maturity of the proposed action and efficient use of resources
- Soundness of the implementation plan
- Capacity of the applicants, and when applicable the consortium as a whole, to carry out the proposed work and mobilise the necessary resources

Impact

- Extent to which the proposal will achieve the expected impacts listed in the Work Programme and plans to disseminate and communicate project results
- Extent to which the proposal will strengthen competitiveness and bring important benefits for society

- Extent to which the proposal demonstrates awareness of the environmental effects of the proposed action.

3.4. What is expected of the proposal?

Following the award criteria, the proposal template will include three corresponding sections, named Relevance, Implementation and Impact. For each of the following sections we describe first in general terms what is expected in a proposal, followed by specific expectations regarding European Digital Innovation Hubs.

3.4.1. Section Relevance

- Describe the overall and specific **objectives** of the project¹⁹, which should be clear, measurable, realistic and achievable within the duration of the project. Objectives should be consistent with the expected impact of the project (see section Impact). Key performance indicators should be defined for various stages of the project.
- Indicate how your proposal is aligned with the objectives and activities as described in the Work Programme and in the call for proposals.
- Describe and explain the **overall concept** underpinning the project.
- Describe and explain the **overall approach**, distinguishing, as appropriate, activities indicated in the relevant section of the work programme.
- Describe the contribution of your proposal to long-term EU policy objectives, other relevant policies and strategies, and synergies with activities at European and national level.
- Describe how the proposal can overcome financial obstacles such as the lack of market finance
- *Explain your focus as a European Digital Innovation Hub, e.g. the geographical scope, sector(s) and application areas you target, the technologies you cover, etc, and how this responds to demand of SMEs and/or the public sector.*
- *Explain how you will set up and/or operate a European Digital Innovation Hub. Explain how you will build on ongoing activities and existing infrastructures, if appropriate. Explain the different activities you will carry out as a European Digital Innovation Hub.*
- *Explain the services and competences you can offer and under what conditions, such as test before invest; skills and training; support to find investments; innovation ecosystem and networking opportunities. Define your KPI's and targets.*
- *Explain how your proposal relates to other parts of the Digital Europe Programme, e.g. planned collaboration mechanisms with other European Digital Innovation Hubs and the competence / excellence centres of HPC, AI and cybersecurity or other capacities built up in the context of Digital Europe Programme.*

¹⁹ The term 'project' used in this template equates to the activities carried out to set up and/or operate a EDIH, and which are covered by the requested grant.

- *Your proposal should be in line with main EU policy objectives, such as a Europe fit for the digital age, the European Green Deal, etc. Your proposal should support national and/or regional policy objectives, relevant smart specialisation strategies, etc.*
- *Describe any regional, national or international activities which will be linked with the project, especially where the outputs from these will feed into the project.*
- *Describe and explain how your proposal triggers co-investments by Member States, regional authorities, and private sector. Please note that EU investments in European Digital Innovation Hubs are dependent on a minimally equal investment by Member States/regions of private actors. Such co-financing is an eligibility criterion.*
- *Describe and explain how your proposal would support SMEs and public administrations in overcoming financial obstacles.*

3.4.2. Section Implementation

For this section of the proposal the following elements are expected:

- A brief presentation of the overall structure of the work plan;
- Timing of the different work packages and their components (Gantt chart or similar) and a graphical presentation of the components showing how they inter-relate (Pert chart or similar);
- Detailed work description, i.e.:
 - a list of work packages;
 - a description of each work package;
 - a list of major deliverables;
 - a list of milestones;
 - a table with critical risks identified and mitigating actions;
- Use of resources:
 - A table showing planned investments in hardware and software
 - A table showing number of person months required;
 - An explanation of subcontracting costs for involvement of subcontractors
 - A table showing 'other direct costs' for participants where those costs exceed 15% of the personnel costs
- Define the services offered and their associated price; this will constitute the price list necessary for determining the amount of aid passed on SMEs
- Describe the proposed management structures and procedures; risk and innovation management.
- Describe the consortium. Indicate how the consortium matches the project's objectives, and how it brings together the necessary expertise. Indicate how consortium members complement one another, how each member contributes to the project, and show that each has a valid role.

- Describe the capacity of the applicants, and when applicable the consortium as a whole, to carry out the proposed work and mobilise the necessary resources.

Definitions:

'Work package' means a major sub-division of the proposed project.

'Deliverable' means a distinct output of the project, meaningful in terms of the project's overall objectives and constituted by a report, a document, a technical diagram, a software etc.

'Milestones' means control points in the project that help to chart progress. Milestones may correspond to the completion of a key deliverable, allowing the next phase of the work to begin. They may also be needed at intermediary points so that, if problems have arisen, corrective measures can be taken. A milestone may be a critical decision point in the project where, for example, the consortium must decide which of several technologies to adopt for further development.

3.4.3. Section Impact

- Describe how your project will contribute to each of the expected impacts mentioned in the work programme, under the relevant topic. Describe the proposed measures to achieve the expected impacts and show how those measures will help to achieve the expected impacts. Include sufficient communication and outreach measures.
- Describe how the proposal will strengthen competitiveness and bring important benefits for society
- Describe the extent to which your proposal demonstrates environmental sensitivity, including for climate change issues (e.g. through sustainable use of resources and/or contribution to circular economy/ green communication to the public)
- Describe any barriers/obstacles (such as regulation, standards, public acceptance, workforce considerations, financing of follow-up steps, cooperation with other organisations), that may determine whether and to what extent the expected impacts will be achieved. (This should not include any risk factors concerning implementation).
- Provide an **'impact and communication plan'** that is regularly updated along the duration of your project. Describe the proposed communication and outreach measures for promoting your European Digital Innovation Hub, its services, and its results during the period of the grant. The plan should be proportionate to the scale of the project, and should contain measures to be implemented during and after the end of the project, if applicable.
- *Define the short, medium and long-term effects of the project.*
- *Who are the target groups? How will the target groups benefit concretely from the project and what would change for them? How will you actively reach out to them and engage them in the activities?*
- *Does the project aim to trigger change/innovation? If so, describe them and the degree of ambition (progress beyond the status quo)*
- *Explain how your EDIH will contribute to achieving a well-functioning network of European Digital Innovation Hubs.*

- *How will you involve start-ups and SME suppliers and if relevant artists/creatives to respond to the needs of the target groups?*
- *How will you involve investors to create impact?*
- *Wherever possible, use the indicators mentioned in the workprogramme and define your targets.*
- *Communication and outreach measures should be tailored to the needs of different target audiences, including groups beyond the project's own community.*
- *Please explain how you will deal with Intellectual Property that is generated via your services, possibly together with other EDIHs, SMEs, public authorities, etc.*
- *Please describe how your proposal would address issues related to the environment or climate change. Please indicate how your proposal would balance environmental issues and competitiveness and growth objectives.*

4. CONCLUSIONS: EUROPEAN ADDED VALUE FOR SUPPORTING HUBS IN DIGITAL EUROPE

Through the co-investments in hubs by Member States and Digital Europe Programme important synergies between the two sources of investment will be reached, as summarised in Figure 7. Apart from the advantages provided in Figure 7, investing in hubs at EU level will also contribute to completing the Digital Single Market; hubs can help implement interoperability, standards, and EU-wide digital administrative solutions that create a business-friendly environment for SMEs to easily access new markets.

Innovations in one country often build on knowledge that was created elsewhere. The network of European Digital Innovation Hubs promote knowledge diffusion and technology spill-over. The expected knowledge spill-overs between advanced and less advanced countries will be a strong force underlying cross-country convergence, benefitting both sides, and creating a stronger Single Market as a recent study showed²⁰, and reducing the digital divide.

Furthermore, EU investments will be a leverage factor to upscale and network EDIHs and provide a meaningful contribution to the current gap in private investment in digitalisation. Digital Europe Programme will also allow Member States, Regions and the EU to co-invest jointly in the same hubs, thus stimulating pooling of resources.

Local added value	European added value
Hub will improve competitiveness of local economy by stimulating digital transformation	Hubs will improve their offer by acquiring new knowledge and capacities through their participation in Digital Europe on HPC, AI, Cybersecurity, Advanced digital skills and public sector solutions

²⁰ <https://www.bertelsmann-stiftung.de/en/topics/latest-news/2019/may/eu-single-market-boosts-per-capita-incomes-by-almost-1000-euros-a-year/>

Hub has specialisation which is based on local strengths and addresses local needs	Networking of the hubs will stimulate knowledge transfer between hubs and rationalisation of investments because facilities are opened up for use outside the local boundaries. It reduces duplication and optimises investments in infrastructure
Hub is near their customers and they speak the same language	Hubs will learn from other hubs by sharing best practices, and by collaboration of hubs in case of missing expertise/facilities.
	The hub network will be a means to promote excellence developed locally to other regions in Europe; it will open new markets for the companies involved in the innovations

Figure 8. Added value of combining local and European investments

5. ANNEX - THE CURRENT LANDSCAPE OF DIGITAL INNOVATION HUBS

5.1. Innovation experiments in Horizon 2020

The Digitising European Industry Strategy identified Digital Innovation Hubs (DIHs) as a key mechanism to help the digital transformation of companies. Between 2016 and 2020 the EU is investing €100 million per year, through H2020, to support DIHs across Europe that help SMEs and mid-caps go digital. Through initiatives such as ICT Innovation for Manufacturing SMES (I4MS) and Smart Anything Everywhere (SAE), more than 150 DIHs and 500 Start-ups, SMEs and mid-caps have taken part so far in 370 different innovation experiments where companies tested digital innovations in collaboration with DIHs.

By 2020, approximately 2000 innovative SMEs across Europe will have received this kind of support from the EU. As a result of this EU funding technically tested prototypes, replicable experiments, solutions and significant experience have been generated that DIHs could benefit from. This provides a solid basis for further developing the network of DIHs.

5.2. Digital Innovation Hubs across the EU

As part of their digitisation strategies, around 15 Member States are implementing national DIH strategies, e.g. Mittelstand 4.0 in Germany, Smart Industry Field Labs in the Netherlands, or the Italian Piano Nazionale Industria 4.0. The starting point, structure and focus of the DIHs vary across the EU; depending on the national or regional strengths, identified in the respective Smart Specialisation Strategies, or national/regional digitisation initiatives.

Despite the diverse nature of DIHs, a DIH catalogue – "yellow pages" – was put in place and monitors the development of DIHs across Europe. Following a bottom-up approach, organisations that comply with a set of basic criteria, may feature in this catalogue. The purpose of the catalogue is to support community building. Organisations registered in the catalogue will be invited to stakeholder meetings. Being in the catalogue is never a pre-requisite for funding.

5.3. Covering white spots and expanding the network

The EU aims to ensure that all companies would have a DIH at working distance; our objective is to have at least one DIH (as a proxy), in every region by 2020. There are however, still many white spots across the EU, especially in Central and Eastern Europe. To bridge this gap, the EU is supporting the creation of new DIHs in those regions through several actions. The project ‘Smart Factories in new EU Member States’ provided training to 34 potential DIHs in the EU13. The current ‘DIHELP’ project is helping another 30 DIHs from 17 countries in regions across Europe that do not have a digitalisation programme yet and where private sector capacity needs to be improved. In addition, a call of €8 million of the Horizon 2020 programme both in 2019 and in 2020 respectively, will support DIHs and SMEs in regions so far underrepresented. The various networking and collaboration activities also help DIHs from these regions to engage with other DIHs by actively participating in the different DIH workshops, networks of the different Coordination and Support Actions (CSAs) and the recently launched DIHNET Community platform.

6. ANNEX - SEAMLESS COLLABORATION BETWEEN ENTERPRISE EUROPE NETWORK AND EUROPEAN DIGITAL INNOVATION HUBS

6.1. Introduction to Enterprise Europe Network

Just like EDIHs, the Enterprise Europe Network (EEN) is the world’s largest support network for small and medium sized enterprises. At the end of 2018, the Enterprise Europe Network covered 65 countries with 604 partner organisations of which 69 are Business Cooperation Centres grouped in 29 third countries as shown in Figure 9 below.

Figure 9. Business Cooperation Centers of the Enterprise Europe Network

The partner organisations of the EEN are genuine business & innovation support organisations (eg. chambers of crafts, chambers of industry and commerce, regional development agencies, innovation agencies, research organisations, universities, regional/national promotional banks) that were selected following a competitive call for proposals. The EEN partners are organised in consortia covering at least a NUTS-2 region.

The EU consortia receive co-funding from the EU budget (up to 60% of all their eligible costs) and the non-EU consortia finance their participation in the Network on a self-financing mode.

The general target group of the EEN are SMEs with a potential for international growth. Beyond that, the EEN also target its services at distinct target groups composed of the beneficiaries of the EIC pilot that can be at the same time innovative start-ups and scale-ups. Being embedded in their regional/national business and innovation support ecosystems, the EEN teams offer their services also to other ecosystem actors such as industrial clusters, research and technology organisations, and universities.

The services of the EEN are available to the SMEs at the level of their regional/national EEN-consortium. These services are grouped in 3 categories; business advisory services, partnership services and innovation services as shown in Figure 10 below.

Within the business advisory services, SMEs can receive:

- free advice on regulatory compliance with EU legislation
- free market intelligence in order to support the preparation of internationalisation activities
- free consultation on access to finance regardless where the source of funding is located (eg. whether it is an EU-funding scheme or a national/regional funding possibility including also the funding possibilities offered by the ERDF-backed measures)
- free basic consultation on issues related to intellectual property

SMEs can also voice their experience – be it bad or good – with EU legislation so as to facilitate evidence based policy making for the European Commission.

Within the international partnership services, SMEs can receive:

- free partnering services to foster the set-up of consortia applying for Horizon 2020/Horizon Europe calls
- free partnering services which include the use of the Partnership Opportunity Database (IT-supported database for partnership offers and partnership requests with automated matching) and the participation in specific B2B matchmaking events with pre-arranged meetings with potential new business partners
- The matching services are also offered in relation to find potential investors/financers for (B2F) for SMEs with an innovative idea including their pitching preparations
- SMEs can also participate in company missions in order to establish new business partnerships

Within the innovation services, SMEs can benefit from:

- free support for technology transfer by helping the valorisation of research results into commercial applications and new products and services
- free innovation management capacity building services which help SME managers to be able to capture all innovation possibilities and carry out complex innovation projects and anchor innovation culture in the day-to-day operation of their business. With a specific diagnosis tool, the EEN also scans all the digitisation potential of SMEs and helps to establish a concrete action plan to implement to proposed recommendations.
- SME beneficiaries of the enhanced European Innovation Council (EIC) pilot can receive free Key Account Manager services of the EEN which consists of a thorough needs analysis for the smooth implementation of the awarded innovation project. Hereafter the Key Account Manager facilitates the identification of the best suitable coach for the most needed skill.

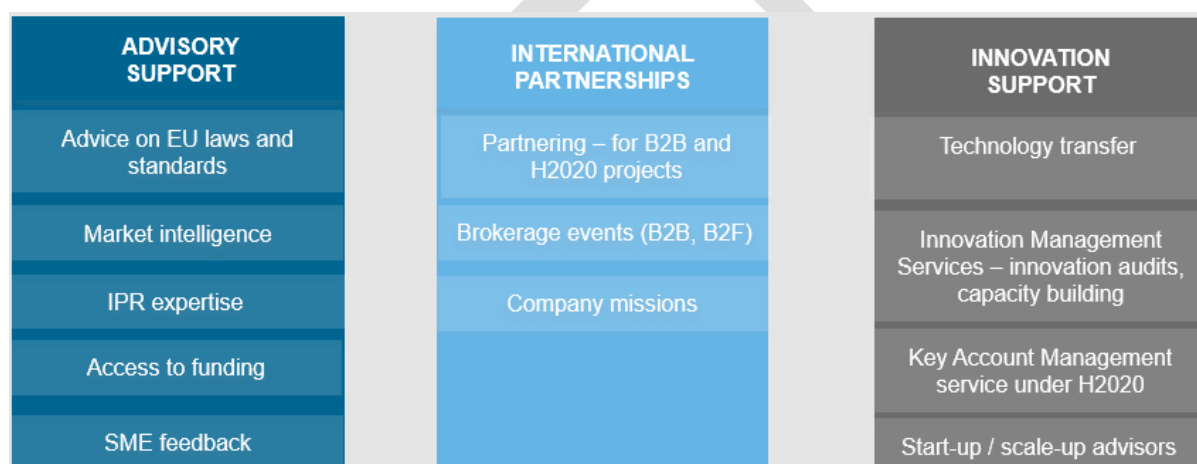

Figure 10. Services of the Enterprise Europe Network consortia

6.2. Foreseen co-operation between the two networks

Cooperation offers a win-win situation by reinforcing the synergetic service offerings of the two networks. As for the form of cooperation, EDIHs and EEN nodes that are operating in the same territory could conclude a service-level cooperation which clearly describes how the two will complement each other and will work synergistically together, offering a seamless service to SMEs. This will also avoid the problem of double funding the same activities through different projects. Possibilities are:

○ Joint investor related events

- EEN partners often have longstanding business relations with investors, some EEN partners are even promotional banks managing financial instruments funded by the ERDF operational programmes, which can be of benefit to organise joint investor related events. Beyond that, EEN partners also have experience in preparing SMEs for their pitching in front of an investor panel.

- **Organisation of common trainings/workshops/info-days for SMEs**
 - EEN partners can (co)organise trainings for SMEs together with EDIHs.
- **Referrals of SMEs (from EEN to EDIHs and from EDIHs to EEN)**
 - EEN partners can enhance the SME outreach of the EDIHs and can refer SMEs to the regional/national members of the EDIH network.
 - EEN partners can also match businesses with EDIHs in a cross-border context.
 - Equally, for further specialised services such as internationalisation the EDIHs can also signpost businesses to EEN partners.
- **Digital scans/audits/assessments**
 - EEN partners carry out digital audits (basic assessment of digital transformation potentials) with the Digital Innovation Quotient tool of the IMP3ROVE Academy – the action plan as a result of the digital audit should include EDIH service offerings whenever appropriate.
 - Audits could also be carried out by joint teams of local/regional EDIHs and EEN partners.

This will be further facilitated by common activities (organised jointly by DG GROW and CNECT or their support actions).

7. ANNEX – DECLARATION OF COOPERATION ON SMART AND SUSTAINABLE DIGITAL FUTURE FOR EUROPEAN AGRICULTURE AND RURAL AREAS ON AGRICULTURE

The Declaration of cooperation on smart and sustainable digital future for European agriculture and rural areas was launched at Digital Day 2019 and signed by the following EU countries: Austria, Belgium, Bulgaria, Czechia, Germany, Estonia, Ireland, Greece, Spain, France, Italy, Cyprus, Latvia, Lithuania, Luxembourg, Hungary, the Netherlands, Poland, Portugal, Romania, Slovenia, Slovakia, Finland, Sweden, plus the United Kingdom. The full declaration is available at <https://ec.europa.eu/digital-single-market/en/news/eu-member-states-join-forces-digitalisation-european-agriculture-and-rural-areas> .

The passages relevant for European Digital Innovation Hubs are:

- (...)
 - build on ongoing initiatives such as the SmartAgriHubs network²¹ and ensure that agriculture is covered as an area of expertise in at least one digital innovation hub

²¹ SmartAgriHubs - Connecting the dots to unleash the innovation potential for digital transformation of the European agri-food sector (<https://cordis.europa.eu/project/rcn/218572/factsheet/en>)

in each Member State, which could be a dedicated agri-food digital innovation hub or a more general one;

- develop a network linking the dedicated agri-food digital innovation hubs making cutting-edge digital technologies and specialised services for agriculture available for local farming and food production ecosystems, including small-scale farms, throughout Europe;
- close the loop by enabling cooperation between the network of dedicated agri-food digital innovation hubs and the more general network of digital innovation hubs;

All these actions are eligible under the European Digital Innovation Hubs scheme of Digital Europe Programme, but they can also be funded by other sources. Also in those cases, Digital Europe Programme foresees mechanisms to ensure that such DIHs operating in the field of agri-food may participate to networking activities foreseen in Digital Europe Programme (see Section 2.6).

8. ANNEX – ADMISSIBILITY AND ELIGIBILITY CRITERIA FOR PROPOSALS IN DIGITAL EUROPE PROGRAMME

Admissibility conditions

To be considered admissible, a proposal must be:

- Submitted on time: proposals must be submitted by the date and time and through the submission means specified in the relevant call for proposals. Proposals must be submitted only as specified in the call: either electronically or on paper. The call deadline is a deadline for receipt of proposals.
- Complete: all requested information must be submitted by the call deadline, including the requested administrative data, signature(s) of the applicant(s), all application forms and their respective annexes (if applicable) and any supporting document(s) specified in the call for proposals. Incomplete proposals, which are missing essential information as required by the call text, will be considered inadmissible.

Eligibility criteria

The eligibility criteria for the actions shall be set out in the work program and call text and shall determine the participation in calls for proposals. Proposals will be eligible if they meet the following criteria:

- 1) As set out in Article 197 of the Financial Regulation, the following applicants should be eligible to participate in the call for proposals. The call for proposals may lay down additional eligibility criteria, which shall be established with due regard for the objectives of the action and shall comply with the principles of transparency and non-discrimination. The following entities shall be eligible:
 - a) Legal persons
 - b) natural persons, in so far as this is required by the nature or characteristics

- of the action or the objective pursued by the applicant;
- c) entities which do not have legal personality under the applicable national law, provided that their representatives have the capacity to undertake legal obligations on behalf of the entities and that the entities offer guarantees for the protection of the financial interests of the Union equivalent to those offered by legal persons. In particular, the applicant shall have a financial and operational capacity equivalent to that of a legal person. The representatives of the applicant shall prove that those conditions are satisfied.
- d) For the purposes of Article 180(5) and of this Article, the JRC shall be considered as a legal person established in a Member State.

2) Legal entities established in:

- a) A Member State or an overseas country or territory linked to it
 - b) A third country associated with the Programme;
 - c) Any legal entity created under Union law or any international organization.
- 3) Legal entities established in a third country, which is not associated to the Programme, are exceptionally eligible to participate in specific actions where this is necessary for the achievement of the objectives of the Programme.
- 4) Natural persons shall not be eligible, except for grants awarded under Specific Objective 4. Advanced digital skills.
- 5) The call text may specify that participation is limited to beneficiaries established in Member States only, or to beneficiaries established in Member States and specified associated or other third countries for security reasons or actions directly related to EU strategic autonomy.

Exclusion criteria - Applicants must certify that they are not in any of the situations listed below:

- i. they are bankrupt or being wound up, are having their affairs administered by the courts, have entered into an arrangement with creditors, have suspended business activities, are the subject of proceedings concerning those matters, or are in any analogous situation arising from a similar procedure provided for in national legislation or regulations;
- ii. they or persons having powers of representation, decision-making or control over them have been convicted of an offence concerning their professional conduct by a judgment of a competent authority of a Member State which has the force of res judicata;
- iii. they have been guilty of grave professional misconduct proven by any means which the contracting authority can justify including by decisions of the EIB and international organisations;
- iv. they are not in compliance with their obligations relating to the payment of social security contributions or the payment of taxes in accordance with the legal provisions of the country in which they are established or with those of the country of the contracting authority or those of the country where the contract is to be performed;
- v. they or persons having powers of representation, decision-making or control over them have been the subject of a judgment which has the force of res judicata for fraud, corruption, involvement in a criminal organization, money laundering or any other illegal activity, where such illegal activity is detrimental to the Union's financial interests;
- vi. they are subject to a financial or administrative penalty referred to in Article

109(1) of the Financial Regulation;

- vii. they are subject to a conflict of interests;
- viii. they are guilty of misrepresenting the information required by the contracting authority as a condition of participation in the procurement procedure or have failed to supply that information.

Proposals failing to meet the above criteria are not accepted for further evaluation

Selection criteria

Applicants might have to demonstrate their financial and operational capacity to carry out the proposed action.

DRAFT

9. ANNEX: PROOF OF DESIGNATION BY MEMBER STATE

9.1. Proof of designation by member state

This form will be an annex to the proposal submitted to the European call

By submitting this declaration, the coordinator confirms that the proposal has been selected by the relevant national procedure carried out for the designation of the candidate European Digital Innovation Hubs

- **Information on changes to the proposal**

Please specify which changes (if any) have been introduced to the proposal after the national selection. Comment briefly on the reason(s) why changes were introduced.

Insert text (500 characters max)

Changes in name/acronym:

[text]

New partners added to the proposal:

[text]

Partners removed from the proposal:

[text]

- **Proof of designation**

Please attach a copy of the official outcome of the national selection procedure.

This can be e.g. a scanned copy of a paper letter, a copy of an electronic document, or a link to the official result on a government web site.

10. ANNEX: EU SURVEY

Two on-line forms will have to be used by Member States to inform the Commission about the list of eligible hubs:

General country information (one per country)

Submission of designated European Digital Innovation Hubs (for Member States) - general information

Fields marked with * are mandatory.

General information about the EDIH submission

This is the first part of the questionnaire to submit to the European Commission the list of designated European Digital Innovation hubs (EDIH).

As representative of a Member State, you will have to submit

- this form including general information, and then
- one form for each EDIH that you plan to designate.

It is possible to submit a draft form and then edit or modify the contents, following the instructions that you will see after clicking on the "submit" button

* Which is your country?

- ☐ Austria
- ☐ Belgium
- ☐ Bulgaria
- ☐ Croatia
- ☐ Cyprus
- ☐ Czechia
- ☐ Denmark
- ☐ Estonia
- ☐ Finland
- ☐ France
- ☐ Germany
- ☐ Greece
- ☐ Hungary
- ☐ Ireland
- ☐ Italy
- ☐ Latvia
- ☐ Lithuania
- ☐ Luxembourg
- ☐ Malta
- ☐ Netherlands
- ☐ Poland
- ☐ Portugal

1

- ☐ Romania
- ☐ Slovak Republic
- ☐ Slovenia
- ☐ Spain
- ☐ Sweden

*How many hubs are you planning to support? (minimum)

Only values between 1 and 99 are allowed

*How many hubs are you planning to support? (maximum)

Only values between 1 and 99 are allowed

Information on the National strategy

This section is meant to collect general information about the National digitisation strategy, the budget available and the expected timeline of actions.

Please describe briefly the relevant National strategy, including possibly references to web pages where the strategy is described.

The National strategy should describe e.g. the geographical coverage, the distribution of budget, and the coverage of the main technological areas.

Please provide information on the budget that your country will make available for the EDIHs

*Total Budget (1000s Euro)

Only values of at least 0 are allowed

Budget from National / local governments (1000s Euro)

2

Budget from European Regional Development Fund (1000s Euro)

Budget from EU recovery fund (1000s Euro)

Budget from other sources (1000s Euro)

Please specify the other sources:

Comments and relevant references

Please provide information on the timeline of the EDIH-related actions in your country

Please explain e.g. the timing constraints due to the National budget cycle or any other timing information

3

Hub-specific information (one per each hub)

Submission of designated European Digital Innovation Hubs (for Member States) - hub-specific information

Fields marked with * are mandatory.

Identification of the Member State and the hub

*Which is your country?

- ☐ Austria
- ☐ Belgium
- ☐ Bulgaria
- ☐ Croatia
- ☐ Cyprus
- ☐ Czechia
- ☐ Denmark
- ☐ Estonia
- ☐ Finland
- ☐ France
- ☐ Germany
- ☐ Greece
- ☐ Hungary
- ☐ Ireland
- ☐ Italy
- ☐ Latvia
- ☐ Lithuania
- ☐ Luxembourg
- ☐ Malta
- ☐ Netherlands
- ☐ Poland
- ☐ Portugal
- ☐ Romania
- ☐ Slovak Republic
- ☐ Slovenia
- ☐ Spain
- ☐ Sweden

*Is this a trans-national hub?

- ☐ Yes
- ☐ No

1

*Which is the other collaborating country?

- ☐ Austria
- ☐ Belgium
- ☐ Bulgaria
- ☐ Croatia
- ☐ Cyprus
- ☐ Czechia
- ☐ Denmark
- ☐ Estonia
- ☐ Finland
- ☐ France
- ☐ Germany
- ☐ Greece
- ☐ Hungary
- ☐ Ireland
- ☐ Italy
- ☐ Latvia
- ☐ Lithuania
- ☐ Luxembourg
- ☐ Malta
- ☐ Netherlands
- ☐ Poland
- ☐ Portugal
- ☐ Romania
- ☐ Slovak Republic
- ☐ Slovenia
- ☐ Spain
- ☐ Sweden

Which is the other collaborating country (2, if any)?

- ☐ Austria
- ☐ Belgium
- ☐ Bulgaria
- ☐ Croatia
- ☐ Cyprus
- ☐ Czechia
- ☐ Denmark
- ☐ Estonia
- ☐ Finland
- ☐ France
- ☐ Germany
- ☐ Greece
- ☐ Hungary
- ☐ Ireland
- ☐ Italy
- ☐ Latvia

2

- ☐ Lithuania
- ☐ Luxembourg
- ☐ Malta
- ☐ Netherlands
- ☐ Poland
- ☐ Portugal
- ☐ Romania
- ☐ Slovak Republic
- ☐ Slovenia
- ☐ Spain
- ☐ Sweden

Which is the other collaborating country (3, if any)?

- ☐ Austria
- ☐ Belgium
- ☐ Bulgaria
- ☐ Croatia
- ☐ Cyprus
- ☐ Czechia
- ☐ Denmark
- ☐ Estonia
- ☐ Finland
- ☐ France
- ☐ Germany
- ☐ Greece
- ☐ Hungary
- ☐ Ireland
- ☐ Italy
- ☐ Latvia
- ☐ Lithuania
- ☐ Luxembourg
- ☐ Malta
- ☐ Netherlands
- ☐ Poland
- ☐ Portugal
- ☐ Romania
- ☐ Slovak Republic
- ☐ Slovenia
- ☐ Spain
- ☐ Sweden

* Unique identifying name of the designated EDIH (short name)

This name should be unique within your country

3

Long name of the EDIH - if needed, the hub can have a longer more descriptive name

* Is this hub already existing and registered in the DIH catalogue? (<https://s3platform.jrc.ec.europa.eu/digital-innovation-hubs-tool>)

- ☐ Yes
- ☐ No

* Please insert the name of the hub in the DIH catalogue

* Please insert the unique ID of the hub in the DIH catalogue

To find the unique ID, select your hub in the catalogue and click on "MORE DETAIL". The ID is the number that you see at the end of the address (URL) just before the string "view" ("1480" in the example below)

Eligibility

A European Digital Innovation Hub (EDIH) is a single organisation or a coordinated group of organisations with complementary expertise, with a not-for-profit objective that support companies – especially SMEs and mid-caps – and/or the public sector in their digital transformation.

For information on how to fill this section, please see chapter 3.2.1 of the document "European Digital Innovation Hubs in Digital Europe Programme"

By filling this form we confirm that the designated EDIH has:

4

☐ **Appropriate competences** related to the functions of the European Digital Innovation Hubs;

Please comment on the competences of the EDIH

☐ **Appropriate management capacity, staff and infrastructure** necessary to carry out the functions of an EDIH;

Please explain the management capacity, staff and infrastructure

☐ **Operational and legal means** to apply the administrative, contractual and financial management rules laid down at Union level;

Please provide more information on the financial viability. All entities participating in a EDIH will be subject to legal and financial viability (LFV) check after the submission of the full proposal

☐ **Appropriate financial viability**, corresponding to the level of Union funds it will be called upon to manage and demonstrated, where appropriate, through guarantees, issued preferably by a public authority.

Please provide more information on the operational and legal means

Objective

For information on how to fill this section, please see chapter 2.5 of the document "European Digital Innovation Hubs in Digital Europe Programme"

Please enter a short description of the hub and its objective(s), including the industry needs and public interest areas which the hub is planning to address

5

* Which is the main focus of the hub?

- ☐ Artificial Intelligence
- ☐ High-performance computing
- ☐ Cybersecurity
- ☐ Advanced digital skills
- ☐ Digital solutions / interoperability for the public sector
- ☐ Other key enabling technologies

If other, please specify:

Which is the main sector / application area of the hub?

- ☐ Manufacturing
- ☐ Agri-food
- ☐ Construction
- ☐ Public administration
- ☐ Circular economy
- ☐ Tourism
- ☐ Cultural heritage
- ☐ Other

If other, please specify:

* Which is the region or geographical area of activity for the hub?

Consortium

For information on how to fill this section, please see chapter 3.2.1 of the document "European Digital Innovation Hubs in Digital Europe Programme"

Description of the coordinating entity of the consortium

6

* Name of the entity

* Staff allocated to the hub (in full-time equivalents, please provide further details if needed)

* Infrastructure and other resources available for the hub (please provide further details if needed)

* Participant Identification Code (PIC)(please make sure that the entity is registered on the Funding & tenders portal)

Description of the other entities which compose the consortium

7

Composition of the consortium

	Name of the entity	Main role in the hub	Staff allocated to the hub (full-time equivalent)	Available infrastructure
1				
2				
3				
4				
5				
6				
7				
8				
9				
10				
11				

8

Short description of the governance structure of the hub

Is the consortium planning to include further partners?

- ☐ Yes
☐ No

Role of the further partners

	Type of entity (e.g. SME, university, local organisation)	Main role in the hub

Contacts

The contact person(s) will be contacted for preparatory and networking activities

* Main contact person

Postal address

* Main contact email

9

Further contact persons, emails, phone numbers
(will be contacted for preparatory and networking activities)

National strategy and funding

(If relevant) please provide information about the relationship between this specific hub and the relevant National or regional strategies.

(If relevant) please provide information about the maximum amount of co-funding available from the Member State for each designated entity in this specific hub

10
